PTO-90C (Rev. 07-01)

Application No. Applicant(s) 09/897.750 SUZUKI, KATSUYA Office Action Summary **Examiner** Art Unit Michael A Spiegel 2175 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply** A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). **Status** 1) Responsive to communication(s) filed on ____ 2b) This action is non-final. This action is FINAL. 2a)□ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. **Disposition of Claims** 4) ☐ Claim(s) <u>1-18</u> is/are pending in the application. 4a) Of the above claim(s) _____ is/are withdrawn from consideration. 5) Claim(s) _____ is/are allowed. 6) ☐ Claim(s) 1-18 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. **Application Papers** 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). 11) The proposed drawing correction filed on ____ is: a) approved b) disapproved by the Examiner. If approved, corrected drawings are required in reply to this Office action. 12) The oath or declaration is objected to by the Examiner. Priority under 35 U.S.C. §§ 119 and 120 DIANE BY MIZEARI PRIMARY PATENT EXAMINER 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) o TECHNOLOGY CENTER 2100 a) ⊠ All b) □ Some * c) □ None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. _____. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application). a) The translation of the foreign language provisional application has been received. 15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121. Attachment(s) 1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) Paper No(s). _ 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) Notice of Informal Patent Application (PTO-152) 3) Information Disclosure Statement(s) (PTO-1449) Paper No(s) 6) Other:

Art Unit: 2175

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 2. Claims 1,2,4,5,10, 11 and 15 are rejected under 35
 U.S.C. 102(e) as being anticipated by <u>Hall et al.</u> (U.S. Patent
 No. 6,253,214).

As to Claim 1, <u>Hall et al.</u> teaches a medical data preservation system comprising:

medical data receiving means for receiving electronic medical data including medical information over a communication line (Fig. 1, 300);

a data storage device in which the medical data received by the medical data receiving means is stored (Fig. 1, 320&330);

Art Unit: 2175

storage condition designating means for use in designating a condition for storage in the data storage device (i.e. file server, Fig. 1, 310); and

a control means for controlling a data-stored state of the data storage device according to the condition for storage designated by the storage condition designating means (Fig. 1, 340).

As to Claim 2, the limitations of this claim has been noted in the rejection of Claim 1 above. Claim 2 is essentially the same as Claim 1, except that Claim 2 is directed towards a method.

As to Claim 4, <u>Hall et al.</u> teaches a medical data preservation system comprising:

an image backup device for preserving a backup copy of medical image data over a network over which information can be transferred (Fig. 2, 100); and

control means for controlling the image backup device according to a backup mode (Fig. 2, 340).

As to Claim 5, <u>Hall et al.</u> teaches a system wherein the backup mode is determined through discussion between a service

Art Unit: 2175

provider and a service receiver (i.e. client-server architecture, Fig. 2, 230 & 310).

As to Claim 10, <u>Hall et al.</u> teaches a medical data preservation method comprising:

selecting a backup mode from among a plurality of backup modes, and designating the selected backup mode as a backing up method (i.e. selecting either immediate printout, storage in the archive device, or storage in the primary and secondary storage, Col. 3, lines 20-27); and

backing up medical image data, which is stored in a storage device, in an image backup device over a network according to the designated backing up method (Fig. 3 or Fig. 4).

As to Claim 11, <u>Hall et al.</u> teaches a method wherein the medical image data is stored in the storage device, and backed up in the image backup device (Fig. 2, 260, 320, 330).

As to Claim 15, <u>Hall et al.</u> teaches a method wherein all of the medical image data in the storage device is backed up for each examination at a time in the image backup device (Fig. 4; Col. 4, lines 58-67; Col. 5, lines 1-2).

Art Unit: 2175

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3, 6-9, 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Hall et al.</u> (U.S. Patent No. 6,253,214) in view of Crawford (U.S. Patent No. 5,901,228).

As to Claim 3, <u>Hall et al.</u> teaches a medical data preservation method for controlling backup of medical image data using a programmed computer, comprising:

selecting a backup mode in which medical image data is backed up (i.e. selecting either immediate printout, storage in the archive device, or storage in the primary and secondary storage, Col. 3, lines 20-27);

backing up medical image data in a selected backup mode (Fig. 3 or Fig. 4);

Art Unit: 2175

<u>Hall et al.</u> does not teach performing accounting according to the selected backup mode.

<u>Crawford</u> teaches performing accounting according to the selected backup mode (i.e. logging CPU time, disk space, bandwidth, etc., Fig. 15, 748).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> to include performing accounting according to the selected backup mode.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> by the teaching of <u>Crawford</u> because performing accounting according to the selected backup mode would allow the user to receive valuable services (for a fee) which were previously not available or available through great expense and/or inconvenience, as taught by <u>Crawford</u> (Col. 14, lines 35-41; Abstract).

As to Claim 6, the limitations of Claims 4 and 5 are taught in by <u>Hall et al.</u> as noted in the 102 rejection above. <u>Hall et al.</u> also teaches a system, wherein the control means control a plurality of objects of backup, according to respective determined backup modes (Col. 2, lines 36-50).

Art Unit: 2175

<u>Hall et al.</u> does not teach a control means that performs accounting according to the backup mode.

<u>Crawford</u> teaches a control means that performs accounting according to the backup mode (i.e. logging CPU time, disk and bandwidth usage etc., as determined by the particular mode of backup, Fig. 14, 748).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Hall et al. to include a control means that performs accounting according to the backup mode.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> by the teaching of <u>Crawford</u>, because including a control means that performs accounting according to the backup mode would allow the user to receive valuable services (for a fee) which were previously not available or available through great expense and/or inconvenience, as taught by Crawford (Col. 14, lines 35-41; Abstract).

As to Claim 7, <u>Hall et al.</u> teaches the limitations of Claim 4, as noted in the 102 rejection above, including a control means.

Art Unit: 2175

<u>Hall et al.</u> does not teach that the control means performs accounting according to the backup mode.

<u>Crawford</u> teaches a control means that performs accounting according to the backup mode (i.e. logging CPU time, disk and bandwidth usage etc., as determined by the particular mode of backup, Fig. 14, 748).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> to include a control means that performs accounting according to the backup mode.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> by the teaching of <u>Crawford</u>, because including a control means that performs accounting according to the backup mode would allow the user to receive valuable services (for a fee) which were previously not available or available through great expense and/or inconvenience, as taught by Crawford (Col. 14, lines 35-41; Abstract).

As to Claim 8, <u>Hall et al.</u> as modified teaches a system wherein the backup mode is determined through discussion between a service provider and a service receiver (i.e. client-server architecture, Hall et al., Fig. 2, 230 & 310).

Art Unit: 2175

As to Claim 9, <u>Hall et al.</u> as modified teaches a system wherein the control can control a plurality of objects of backup according to respective determined backup modes and performs accounting on each object of backup (<u>Hall et al.</u>, Col. 2, lines 36-50; Crawford, Fig. 14, 748).

As to Claim 17, <u>Hall et al.</u> teaches a medical data preservation method comprising:

selecting a backup mode from among a plurality of backup modes and designating the selected backup mode as a backing up method; and

backing up medical image data, stored in a storage device, in an image backing up device over a network according to the designated backing up method.

<u>Hall et al.</u> does not teach performing accounting so as to calculate a charge for backup according to the selected backup mode.

Crawford teaches performing accounting so as to calculate a charge for backup according to the selected backup mode (i.e. logging CPU time, disk space, bandwidth, etc., Fig. 15, 748).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to

Art Unit: 2175

have modified <u>Hall et al.</u> to include performing accounting so as to calculate a charge for backup according to the selected backup mode.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Hall et al. by the teaching of Crawford because performing accounting so as to calculate a charge for backup according to the selected backup mode would allow the user to receive valuable services (for a fee) which were previously not available or available through great expense and/or inconvenience, as taught by Crawford (Col. 14, lines 35-41; Abstract).

As to Claim 18, <u>Hall et al.</u> as modified teaches a method wherein a charge for backup is calculated as a product of an accounting point, depending on the selected backup mode, a period during which backup is continued, and a backup rate (i.e. charging based on bandwidth usage, storage space, etc., Fig. 18, 924; Fig. 22F; Fig. 22G).

5. Claims 12, 13, 14, and 16 are rejected under 35 U.S.C.

103(a) as being unpatentable over <u>Hall et al.</u> (U.S. Patent No.

6,253,214) in view of Midgley et al. (U.S. Patent No 6,253,214).

Art Unit: 2175

As to Claim 12, <u>Hall et al.</u> teaches the limitations of independent Claim 10, as noted above.

Hall et al. does not teach a method wherein all of the medical image data stored in the storage device is backed up at a time in the image backup device at any set time.

Midgley et al. teaches a method wherein all of the medical image data stored in the storage device is backed up at a time in the image backup device at any set time (i.e. user selection of files to be backed up and backup time, backup profile, Fig. 3; Col. 11, lines 34-50).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> to be able to backup all medical image data at any set time.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> by the teaching of <u>Midgley et al.</u> because modifying <u>Hall et al.</u> to be able to backup all medical image data at any set time would allow the system administrator greater flexibility in setting backup policies that are less obtrusive and can operate in a 24/7 environment, as taught by <u>Midgley et al.</u> (Col. 1, lines 10-64).

Art Unit: 2175

Claims 13 and 14 are similar to Claim 11, in that they each specify a subset of all medical data to be backed up (patient medical data as stored in a single directory and a set of patient directories corresponding to a single medical institution), and thus are rejected under the same grounds as Claim 11, as each subset is selectable in the backup profiles of Midgley et al.

As to Claim 16, <u>Hall et al.</u> teaches the limitations of independent Claim 10, as noted above.

<u>Hall et al.</u> does not teach a method wherein the backup mode is selected and designated based on a backup period and/or an amount of data to be backed up.

Midgley et al. teaches a method wherein the backup mode is selected and designated based on a backup period and/or an amount of data to be backed up (Col. 3, lines 33-46).

Therefore it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> to include a backup mode which is selected and designated based on a backup period and/or an amount of data to be backed up.

Art Unit: 2175

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified <u>Hall et al.</u> by the teaching of <u>Midgley et al.</u> because modifying <u>Hall et al.</u> to include a backup mode which is selected and designated based on a backup period and/or an amount of data to be backed up would allow the system administrator greater flexibility in setting backup policies that are less obtrusive and can operate in a 24/7 environment, as taught by <u>Midgley et al.</u> (Col. 1, lines 10-64).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tawara et al. (U.S. Patent No. 4,958,283) teaches a method and system for storing and communicating medical image data.

Ross, Jr. et al. (U.S. Patent No. 5,823,948) teaches a medical records, documentation, tracking and order entry system.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael A Spiegel whose telephone number is 703-305-7605. The examiner can normally be reached on M-F 9:00-5:30.

Art Unit: 2175

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dov Popovici can be reached on 703-305-3830. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-7239 for regular communications and 703-746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
